

# REEFER TRAILER

Reefer Trailers are utilized for shipments that require a temperature-controlled environment while on route to destination. Loads can travel at specific temperatures or temperature ranges which allow for the transport of fresh, frozen or protect from freeze loads. There are times when a Reefer Trailer is used in lieu of a Dry Van with the refrigeration unit simply turned off. Much like a Dry Van, Reefers tend to be loaded with skidded product from a dock via forklift or pallet jack. Reefers are often used for floor loaded product such as nursery plants or flowers.

REEFER TRAILER DIMENSIONS		REEFER TYPICAL CARGO MAXIMUMS
